MODULE NAME:	MODULE CODE:
PROGRAMMING 3C	**PROG7313**
OPEN SOURCE CODING (INTRODUCTION)	**OPSC7311**

ASSESSMENT TYPE: POE (PAPER AND MARKING RUBRICS)

TOTAL MARK ALLOCATION: 300 MARKS

TOTAL HOURS: A minimum of 35 HOURS is suggested to complete this assessment

By submitting this assignment, you acknowledge that you have read and understood all the rules as per the terms in the registration contract, in particular the assignment and assessment rules in The IIE Assessment Strategy and Policy (IIE009), the intellectual integrity and plagiarism rules in the Intellectual Integrity Policy (IIE023), as well as any rules and regulations published in the student portal.

INSTRUCTIONS:

1. ***No material may be copied from original sources, even if referenced correctly, unless it is a direct quote indicated with quotation marks. No more than 10% of the assignment may consist of direct quotes.***
2. ***Please ensure that you submit your assignment through Turnitin. Please make sure you attach a similarity report to your POE if you are required to submit a hard copy of your PoE.***
3. ***Make a backup of your assignment before handing it in.***
4. *Follow all instructions on the PoE cover sheet.*
5. *This is a group assignment (Max of 3 -5per group)*

© The Independent Institute of Education (Pty) Ltd 2026

Referencing Rubric

Providing evidence based on valid and referenced academic sources is a fundamental educational principle and the cornerstone of high-quality academic work. Part of achieving this quality is referencing in a way that is consistent and congruent with the requirements of the referencing style being used.

Therefore, inconsistent and/or incongruent referencing will result in a penalty of **a maximum of ten percent being deducted from the overall percentage** awarded to your assessment submission.

Please note that **evidence of plagiarism** in the form of copied or unreferenced work, absent reference lists, or exceptionally poor referencing **may result in action being taken in accordance with The IIE's Intellectual Integrity and Property Rights Policy (IIE023)**. Similarly, **evidence of excessive AI usage may result in action being taken in accordance with The IIE's Student Conduct, Discipline and Safety Policy (IIE015)**.

Markers are required to provide feedback to students by **circling/underlining the information in the table below that best describes the student's work and by adding constructive commentary where appropriate.** The examples provided are not exhaustive but illustrate the errors.

Deductions

- Where the student's work contains **five or more errors** aligned to the **minor errors column** below, **deduct 5% from the overall percentage.**
- Where the student's work contains **five or more errors** aligned to the **major errors column** below, **deduct 10% from the overall percentage.**
- **Where both minor and major errors** (e.g. two minor and three major, etc.) are present, **deduct 10% only** (and not 5% or 15%) from the overall percentage.

Required: **Consistent and congruent referencing**	**Minor errors** **Deduct 5% from overall percentage.** **Example: if the response receives 70%, deduct 5%. The final mark is 65%.**	**Major errors** **Deduct 10% from the overall percentage.** **Example: if the response receives 70%, deduct 10%. The final mark is 60%.**
Consistency • The **correct referencing style** for the **discipline** – i.e., either **Harvard**, OR **APA** (for Psychology), OR **Law**, OR **IEEE** (for ICT/Engineering) – has been used consistently for all in-text references and in the bibliography/reference list. • **Concepts** and **ideas** that are **quoted** and/or **paraphrased** are referenced consistently throughout. • **Position of the in-text reference**: an in-text reference is positioned consistently where appropriate for every quote and paraphrase.	**Minor inconsistencies:** • The referencing style used is generally consistent with what is required, but there are one or two changes/errors in the format of in-text referencing and/or in the bibliography/reference list. • For example, page numbers for direct quotes in-text have been provided for one source, but not in another. Or, two book chapters in the bibliography/reference list have been referenced in two different formats. Or, the publication year has been placed after the author name in one bibliography/reference list entry, and after the source title in another, etc. • Concepts and ideas in quotes and/or paraphrases are typically referenced, but a full in-text reference is missing or incomplete from one or two small sections of the work. • Position of the references: in-text references are only given at the beginning and/or end of every paragraph.	**Major inconsistencies:** • Poor and wholly inconsistent referencing style used in-text and/or in the bibliography/reference list. • Multiple referencing styles for the same source types have been used. • For example, the format for direct quotes in-text and/or book chapters in the bibliography/reference list and/or year of publication in the bibliography/reference list is different across multiple instances. • Concepts and ideas in quotes and/or paraphrases are haphazardly referenced in-text. • Position of the references: in-text references are only given at the beginning or end of large sections of work.
Feedback on referencing consistency:		
Congruency • **Each source** reflected within **in-text references** is included accurately in the **bibliography/reference list.** • All **bibliography/reference list** entries are in the **required order** for the referencing style used (e.g. alphabetical, alphabetical under subheadings, numerical). • All **direct quotes** and **paraphrases** have been **integrated appropriately** into the text using introductory phrases, accurate grammar, etc.	**Minor incongruences:** • There is largely a match between the sources presented in-text and those in the bibliography/reference list, but one or two sources that appear in-text do not appear in the bibliography/reference list, or vice versa. Or key source information is missing from one or two in-text references or bibliography/reference list entries only (e.g. publication year, city of publication, URL date accessed, etc.). • There is a clear and largely accurate ordering of sources in the bibliography/reference list as required by the referencing style used, but with one or two references out of order. • An attempt has been made for source integration into the text using appropriate introductory phrases and grammar, but one or two quotes or paraphrases do not flow as clearly or logically within the sentence structure as they could.	**Major incongruences:** • No relationship/several incongruencies between the in-text referencing and the bibliography/reference list. • For example, multiple sources are included in-text, but not in the bibliography, and/or vice versa. Key source information is missing from multiple in-text references and/or reference list entries. A URL link, rather than the actual reference, is provided in the bibliography. Sources are repeated in the reference list, etc. • Most sources are listed in a haphazard order throughout the bibliography/reference list. • Few to no appropriate introductory phrases or rules of grammar have been applied, and many direct quotes and/or paraphrases feel disconnected from the flow of the text.
Feedback on referencing congruency:		
Overall feedback on referencing, with suggested improvements:		

© The Independent Institute of Education (Pty) Ltd 2026

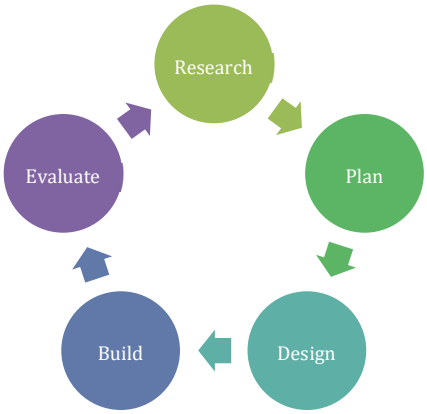
Background

This portfolio of evidence comprises two parts submitted during the semester and the finalisation of your PoE, each of which takes you through conceptualising, designing, and building a mobile application.

You need to create a user-friendly **personal budget tracker** app. The app should help users track their spending habits and savings goals, and it should make budgeting fun and engaging through gamification.

Finally, the app code will need to be pushed to, as well as making use of unit testing and GitHub actions for running the necessary tests.

To be able to create the app, you will need to use all the techniques you learnt during this course, as well as do your research on how to complete some of the tasks required of you. It is also critical that you approach the project in a methodical and planned manner. For this reason, the project will follow a Research – Plan – Design – Build – Evaluate cycle:



This PoE will run for one full cycle. After one full cycle, you can always restart the process to refine your app further.

The different phases of the cycle will be related to the different tasks as follows:

- **Part 1: Research, Planning and Design**
- **Part 2: Build**
- **Final PoE: Build and Evaluate**

© The Independent Institute of Education (Pty) Ltd 2026

Introduction

Each of the tasks below builds on top of one another. Be sure to complete or update one part before moving on to the next task. Each task will be individually assessed by your lecturer, and feedback for each task will be provided.

The exact features, design, and layout of your app are up to you. Remember that managing finances is often perceived as stressful or tedious. The app must be appealing, intuitive, and engaging to encourage consistent use. Consider gamification elements to make tracking finances more enjoyable and rewarding.

In the final submission, the app must be able to perform at least the following tasks:

- The user must be able to **register** and **log in** to the app using a username and password.
- The user must be able to **create categories** for expenses (e.g., "Groceries," "Entertainment," "Transport").
- The user must be able to **add an expense** entry, specifying at least the amount, date, description, and category.
- The user must be able to optionally attach a photo (e.g., a receipt) to each expense entry.
- The user must be able to **set a monthly total budget goal** and specific limits for individual categories.
- The user must be able to **view a list** of all expenses during a **user-selectable period**. If a receipt photo was stored for an entry, the user must be able to access it from this list.
- The user must be able to view the total amount spent on each category during a user-selectable period.
- All this data should be **saved to a local DB.**
- The user must be able to **view a graph** showing daily spending over a user-selectable period. This graph must clearly display category spending and allow the user to identify trends (final PoE only).
- The app must display a progress dashboard that shows how well the user is staying within their budget goals for the current month. Overspending categories must be highlighted visually (final PoE only).
- The app must include **gamification elements** such as rewards or badges for meeting budget goals or consistent expense logging (final PoE only).
- The data must be stored in an **online database** so users can access it across multiple devices (final PoE only).

© The Independent Institute of Education (Pty) Ltd 2026

These features are the minimum that's required for the final submission. Your app also needs to work logically and be easy to use. And you will add your own features for the final POE submission.

The tasks will be evaluated according to the rubrics at the end of the document. Make sure that you understand what is expected by reading carefully through these rubrics!

Part 1 — Research, Planning and Design (Marks: 100)

Learning Units 1 to 3

At the end of this specific part, students should be able to:

- *Create a new app.*
- *Use images in an app.*
- *Apply layouts to the user interface of an app.*
- *Use the TextView and ImageView controls in an app.*

This task is composed of two sections, weighted equally:

- Research
- Planning and design

It is recommended that you create two separate documents for the submission.

Research (Marks: 50)

You will research **three existing personal budgeting apps** available for the Android operating system. Present your findings in a typed PDF document (1500 to 2000 words). Your research should include the following sections:

1. Introduction.
2. Research on each of the apps, including:
    a. Overview of the app, including screenshots with descriptions
    b. Strengths and weaknesses of the app
    c. Innovative features of the app.
3. A visual (infographic) comparison of all three apps.
4. A list of the best features from all the apps that you want to include in your app.
5. Conclusion.
6. References.

© The Independent Institute of Education (Pty) Ltd 2026

Make sure you **reference** correctly for this task. See the referencing rubric at the beginning of this document. You are required to reference **multiple sources** for **each app** that you are researching to ensure that you have a **balanced view** of the app.

Make sure that the infographic is sized so that the text is readable. Also, make sure that the size of the PDF file does not exceed 10MB, since this document must be submitted through Turnitin.

Planning and Design (Marks: 50)

For this task, you will need to fully design your app. The purpose of this task is to ensure you know exactly what you need to build and how you will build it before you start with the implementation of the prototype.

The design needs to link back to the research, since the purpose of the research is to inform the design.

You will need to present your design as a typed PDF document (1000 to 1500 words) with the following sections:

- Introduction.
- A brief **overview** of the app, including a **name** for the app, an initial **icon design**, and a **description** of the **innovative features** that you are planning to include.
- A **detailed list** of the **requirements** for the app. The requirements must include all the minimum requirements from this document, but you must elaborate on each of those requirements rather than just copying them. And remember to add your own features that you want to include, for example, gamification. The requirements must be detailed enough for someone else to be able to build your app by just reading this document!
- **User interface design,** including a **mockup** for **each screen**, a **description** of the purpose of the screen, and a **diagram** showing how the user navigates between the various screens.
- **Project plan** detailing deadlines and milestones for the project, in the format of a **Gantt chart**. Break down the tasks into **smaller tasks** than just “implement the prototype”. Include some time for testing and bug fixing.
- **Conclusion.**
- References.

© The Independent Institute of Education (Pty) Ltd 2026

Part 2 — App Prototype Development (Marks: 100)

Learning Units 1 to 4

At the end of this specific part, students should be able to:

- *Apply layouts in an app.*
- *Use the EditText, NumberFormat and SeekBar in an app.*
- *Apply event handling in an app.*
- *Create an activity.*
- *Apply an intent in an application.*
- *Reading and writing to RoomDB*

For this task, you will need to build a fully working prototype. This prototype needs to include all the features listed in the **instructions** section of this document, but based on your own design and user interface layout.

This task involves developing a **budget tracker app** with a focus on functionality, data persistence, and a user-friendly interface. Below is the detailed breakdown of how to implement the requirements:

- The user must be able to **log in** to the app using a username and password.
- The user must be able to create **categories** that the expense and budget entries will belong to.
- The user must be able to **create an expense entry**, specifying at least the date, start and end times, description, and category.
- The user must be able to optionally add a **photograph** to each expense entry.
- The user must be able to set a **minimum** monthly goal for money spent, as well as a **maximum** goal.
- The user must be able to view the **list** of all the expense entries created during a **user-selectable period**. If a **photo** was stored for an entry, the user must be able to **access** it from this list.
- The user must be able to view the **total amount** of money spent on each **category** during a **user-selectable period**.
- All data should be saved to a local SQLite, RoomDB or similar offline Android database platform.

© The Independent Institute of Education (Pty) Ltd 2026

The **demonstration video** must effectively demonstrate the features of the app and be fully **professional**. The video must include a **voiceover** explaining what you are showing. Remember to **compress** the video to make uploading it to Arc easier and faster.

The app must have a **user-friendly** and **appropriate user interface** that is able to handle **invalid inputs** made by the user without crashing. The app must be working with only **minor bugs** and errors.

Version Control with GitHub: Initialise the repository with a **README file**. **Commit** and **push** your project files to the **GitHub repository**. Regularly commit and push your code as you make progress.

Conduct automated testing on the main functionality of your app. Make use of **GitHub actions** to run tests and build your code to make sure it will work on not just your computer. Use this guide that will assist in creating this:

- https://github.com/marketplace/actions/automated-build-android-app-with-github-action [Accessed on 03 November 2025].
- *https://github.com/IMAD5112/Github-actions/blob/main/.github/workflows/build.yml* [Accessed on 03 November 2025].

Submission:

For your submission, present the following:

- The complete Kotlin source code for the Android app needs to be submitted on GitHub. ***No zip files are allowed.***
- Add comments to your code, and don't forget to reference it.
- Make use of logging to show your understanding of your code.
- Your README file for your app that is also on GitHub. **If no GitHub used or incorrectly used will result in -5% off your hand in.**
- A video presentation showcasing all the app's features. Include a link to this video in the README file.
- The built apk for your app.
- **Only working code will be marked**

You can upload your video to YouTube, make it unlisted, and add that link to your README file.

You can also use any video recording software you like.

Just make sure to include a voice-over to show your understanding.

© The Independent Institute of Education (Pty) Ltd 2026

Part 3 — Final App Development (Marks: 100)

All learning units

At the end of this specific part, students should be able to:

- *Create a Firebase database.*
- *Create code to read data from the Firebase database.*
- *Create code to write data to the Firebase database.*

The final app needs to run on a **mobile phone** and not an emulator. This means that you need to **plan well in advance** to record the required video on a mobile phone if you don't own an Android phone yourself.

Remember to implement your lecturer's feedback on the prototype before adding the new features. Pay special attention to the feedback on the user interface. Marks will be awarded for that again in this part, so you now have the opportunity to improve on what you did before.

For the final submission of the app, you need to include the following features that were not required for the prototype:

- The user must be able to view a **graph** showing the **amount spent per category** over a user-selectable period. The graph must also display the **minimum and maximum goals** (final PoE only).
- The app must display in a **visual format** how well the user is doing with staying between their minimum and maximum spending **goals** over the past month (final PoE only).
- The data must be stored in an **online database** (final PoE only).

In addition to these features, you must have:

- **Your own features** as described in your design document. You must include at least **two** of your own features. **Document** your two features in a **README file** so your lecturer knows what to look out for.
- An **app icon** and final **image assets**.

You must create a **demonstration video** that effectively demonstrates the features of the app running on a **mobile phone,** and it must be fully **professional**. The video must include a **voiceover** explaining what you are showing, and it must show that the data is **stored online**. Remember to **compress** the video to make uploading it to Arc easier and faster.

© The Independent Institute of Education (Pty) Ltd 2026

Tip: OBS (Open Broadcaster Software) is free and open-source software that allows great flexibility for adding audio to a video recorded with a screen recorder on your phone!

Version Control with GitHub: Initialise the repository with a **README file**. **Commit** and **push** your project files to the **GitHub repository**. Regularly commit and push your code as you make progress.

Conduct automated testing on the main functionality of your app. Make use of **GitHub actions** to run tests and build your code to make sure it will work on not just your computer. Use this guide that will assist in creating this:

- https://github.com/marketplace/actions/automated-build-android-app-with-github-action [Accessed on 03 November 2025].
- *https://github.com/IMAD5112/Github-actions/blob/main/.github/workflows/build.yml* [Accessed on 03 November 2025].

Documentation:

Prepare a comprehensive report detailing the purpose of the app, its design considerations and the utilisation of GitHub and GitHub Actions. Include all of this inside your **README file inside GitHub**. Add images and make the README file your own.

Submission:

For your submission, present the following:

- The complete Kotlin source code for the Android app needs to be submitted on GitHub. ***No zip files are allowed***.
- Add comments to your code, and don't forget to reference it.
- Make use of logging to show your understanding of your code.
- Your README file for your app that is also on GitHub. **If no GitHub used or incorrectly used will result in -5% off your hand in.**
- A video presentation showcasing all the app's features. Include a link to this video in the README file.
- The built apk for your app.
- A copy of your research and **design documents** as submitted in part 1.
- **Only working code will be marked**

You can upload your video to YouTube, make it unlisted, and add that link to your README file. You can also use any video recording software you like. Just make sure to include a voice-over to show your understanding.
